

## **Simplify the migration of SAP workload to the AWS Cloud - SE16N launch a Migration Factory for SAP**

SE16N sp. z o.o. a leading SAP technology service provider announces the launch of a Migration Factory for SAP workload on the AWS Cloud. By developing further collaboration with AWS, SE16N will be able to provide SAP clients with an expert selection of solutions and services to help companies to increase value, optimize return and accelerate migration of their SAP Workloads with Amazon Web Services.

SE16N demonstrates its SAP expertise and its ability to help customers deploy their SAP workloads quicker and more effectively on the AWS Cloud by entering the AWS Migration Acceleration Program (MAP) for SAP and by providing the SAP Competence certification.

To describe the conceptual architecture, the process begins with a discovery workshop to discuss the migration and modernization strategy of the client. Usually, the next steps are an estimation of the overall cost of ownership, a proof of concept and a migration plan. For an effective migration to AWS, this organized approach provides a well-defined and directed route.

### **Key benefits**

Among the key benefits of MAP for SAP, the customer can expect:

- **Migration funding** - SE16N and AWS offer funding to reduce migration costs, enabling many organizations with minimal upfront costs to move to the cloud. Together with AWS Savings Plans, using SE16N experience for cloud migration will reduce time and cost for organizations that want to move to AWS but because of high investment, they are hesitant.

- **Assessment and Engagement** – SE16N sets the roadmap for predictable results through using tools and accelerators effectively. Customers receive a detailed roadmap detailing workstreams, identifying goals, and establishing the required performance targets.
- **Migration automatization** - CloudEndure by AWS leverages the SAP Migration program to deliver a highly automated migration that reduces risk, time, and costs. It will move clients to Amazon Web Services rapidly and successfully.
- **Post migration care** – For companies looking to boost business processes, SE16N is a proactive partner. With combination of practical experience and technology SE16N delivers reliable operations and continuous support.

## About SE16N

At SE16N, we understand that modern technologies are based on two pillars: analytical thinking and imagination. We can take full advantage of their possibilities, thanks to which we will take your company to a higher level of digitization.

As a SAP consulting company, we have many years of experience in implementing SAP solutions and maintaining customer systems for both local and global customers. By constantly improving our qualifications and constantly developing our competences in the SAP area, we can support our clients at the highest level and take care of their systems so that they grow their business feeling safe.

We work only with the best on the IT market, including Amazon Web Services (AWS), SAP, VMware, Informatica, Celonis, UIPath, Okta, HPE or Lenovo. We focus on comprehensive activities, which is why we provide both consulting and implementation services. We analyze your needs, implement appropriate solutions, monitor IT systems and infrastructure - we will guide you through the
